magicpin

Problem Overview

Problem Ahead

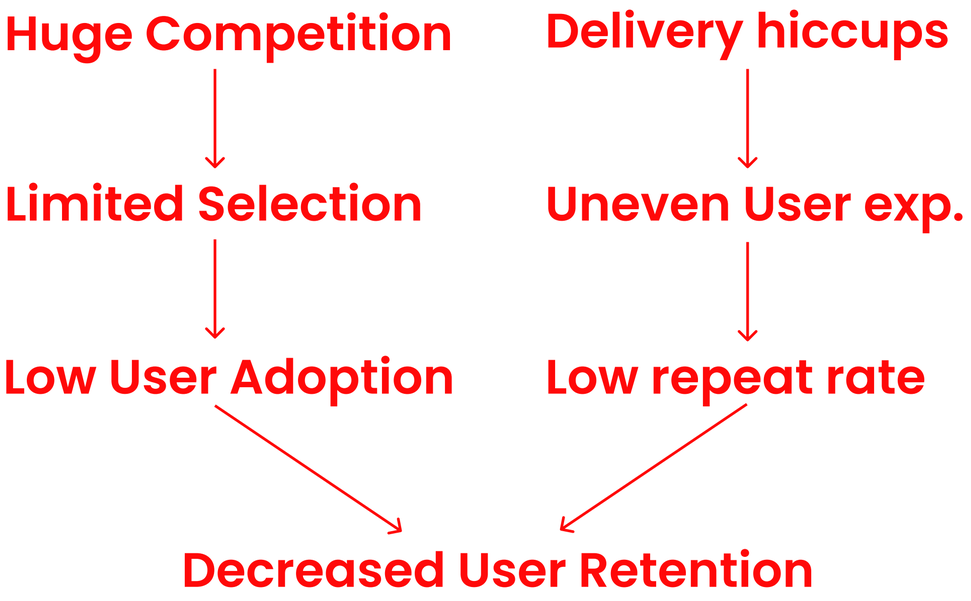

Magicpin has always found it difficult to retain its new users. Only about 5% of the users stay in the platform and the rest leave it after using a bit or after making their first purchase. We need to boost the retention of Magicpin by 15% in the next six months.

Value Proposition

For Consumers:
Users earn cashback and “Magic Points”(reward points) for purchasing at local stores, restaurants, etc.

For Retailers:
Provides platform for local business to reach larger audience.

Problem Breakdown

Why solve this problem?

- User retention helps in building a good reputation of the platform, thus can even bring more users
- Retained users can contribute to company’s revenue and growth more effectively
- Satisfied users may recommend the platform to others thus leading to organic growth of the platform

Assumptions

- Target Demographic is Indian Users.
- New users are considered while solving the problem.

magicpin

Overview

About Magicpin

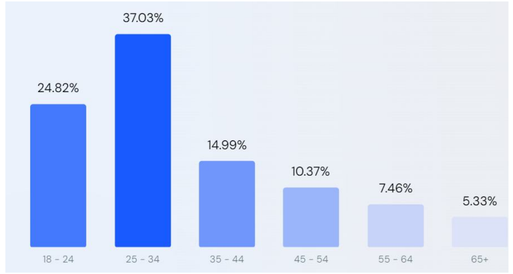

Magicpin, based in Gurgaon, is a platform that helps users discover products and earn rewards like points and cashback. It also enables e-commerce and physical retail stores to market their offerings effectively.

Demographics

Gender distribution

Age distribution

Source

Business model

Magicpin offers a pay-per-conversion model, which basically refers to drawing commissions from sellers/merchants only after an order is placed by the end user.

Revenue model

1. Voucher Sales

- Simplified coupon purchases redeemable at various retailers boost revenue and enhance customer satisfaction.

2. Commission Partnerships

- Earns commissions from brands and retailers for facilitating transactions, ensuring steady cash flow.

3. Advertising and Promotion

- Uses consumer data for targeted ads, increasing merchant visibility and driving repeat business.

Vision

"To redefine hyperlocal retail."

Market and product Research

The ecommerce market is expected to increase significantly, with sales expected to reach US $59.25 billion by 2024, according to a Statista report.

An expected 11.45% annual growth rate from 2024 to 2029, which would result in a projected market volume of US $101.90 billion by 2029.

Magicpin is currently in a loss of INR 144.96 Cr

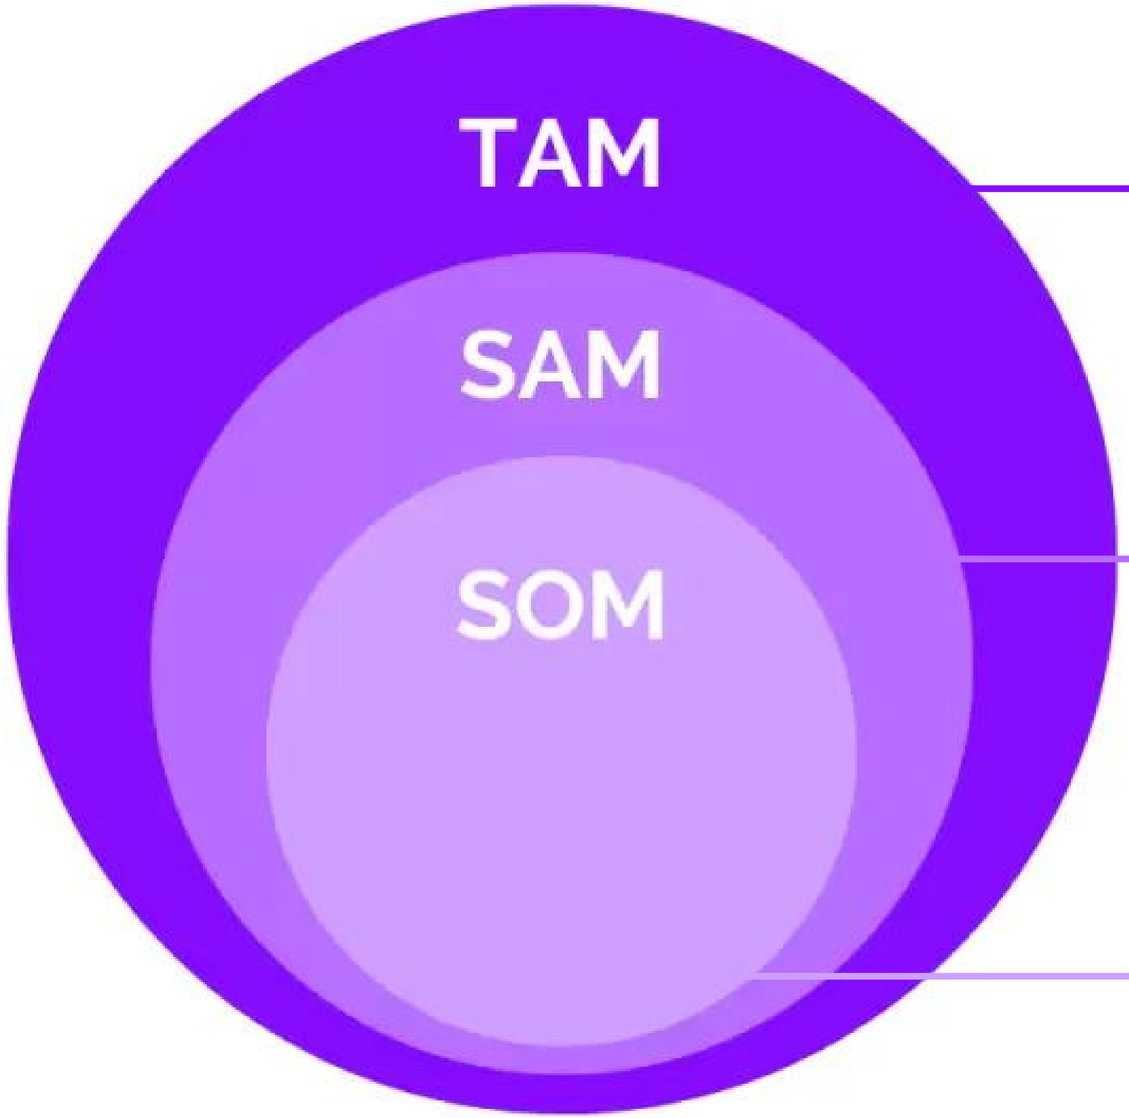

70% of the retailers on Magicpin's platform are local while 30% are organised.

A user does around 6 transactions on Magicpin every month.

Market Sizing

TAM = 1.42 B x 0.7 = 0.99 B

From deck assumption: Indian Population = 1.42 billion.

Considering 70% of population aged between 13 and 65, which would be the target user base. source

SAM = 0.99 B x 0.4 = 0.396 B

Total Addressable Market (from above): 0.99B

Considering 40% of population in urban areas, which would be our target area. source

SOM = 0.396 B x 0.25 = 0.099 B ~ 10Cr

Serviceable Addressable Market (from above): 0.396B

Factors limiting SOM: Low brand awareness, high CAC. Consider 25% of the SAM as a realistic SOM within 1 year.

magicpin

User Persona

Confused Chinmay

Age: 23

Occupation: College Student

Technical Adaptibility

Background -

- College in Mumbai, doing 3 month internship in Bangalore.
- Loves exploring but doesn't have much time due to workload.

Painpoints -

- Difficult to figure out places since he does not know a lot of people.
- The stipend does not pay him enough.

Needs -

- Need to find places to eat, shop etc nearby.
- Needs discounts since stipend does not suffice.

Workaholic Wishakha

Age: 35

Occupation: House Wife

Technical Adaptibility

Background -

- From Chennai, but lives in Delhi due to husband's job.
- Loves shopping and wearing fancy clothes.

Painpoints -

- Does not possess much fluency in English.
- Not knows much nearby and hence finds time consuming to visit desired shop.

Needs -

- Needs a shopping app in her regional language.
- Wants an easy to use platform where she can find her desired shop.

magicpin

User Journey Map

Step 1	Action	Empathy	Painpoints
Login and onboarding page	• Visits signup page • Visits onboarding		• No information or context behind magicpoints(what is its use, why is it there etc)

Step 2	Action	Empathy	Painpoints
Home page	• Visits home page		• No product walkthrough or guided introduction provided, leaving users to explore on their own • Since main focus of app is local stores, people living in tier 2 or 3 cities who are not fluent in english might feel left out.

Step 3	Action	Empathy	Painpoints
Buying of coupons or other services	• Performs buying of vouchers • Performs buying of other services like food delivery		• Too less options to earn magicpoints. • Delivery issues(Playstore reviews) • Poor customer support(Playstore reviews)

magicpin

Pain Points Prioritization

Pain Points	MoSCoW	Comments	Effort vs Impact
No information or context behind magicpoints(what is its use, why is it there etc)	WON'T	Upon continous walkthrough of the app, user gets to know its context.	----------
No product walkthrough or guided introduction provided, leaving users to explore on their own	COULD	Upon 3-4 walkthroughs, user gets comfortable with the interface.	High effort Low impact
Since main focus of app is local stores, people living in tier 2 or 3 cities who are not fluent in english might feel left out.	SHOULD	Multiple language option should be there as app's main focus is local delivery	High effort Medium impact
Too less options to earn magicpoints.	MUST	More options should be there as main attraction for this app is fancy discounts which could be availed through magicpoints.	High effort High impact
Delivery issues(Playstore reviews)	SHOULD	Improve delivery services by investigating the reasons for each late delivery and improving accordingly.	High effort High impact
Poor customer support(Playstore reviews)	SHOULD	Develop an AI chatbot which will cater to all user needs on time.	Medium effort Medium impact

magicpin

MagicStreak

MagicStreaks allows users to collect magiccoins by maintaining a daily streak of processing a purchase through the app.

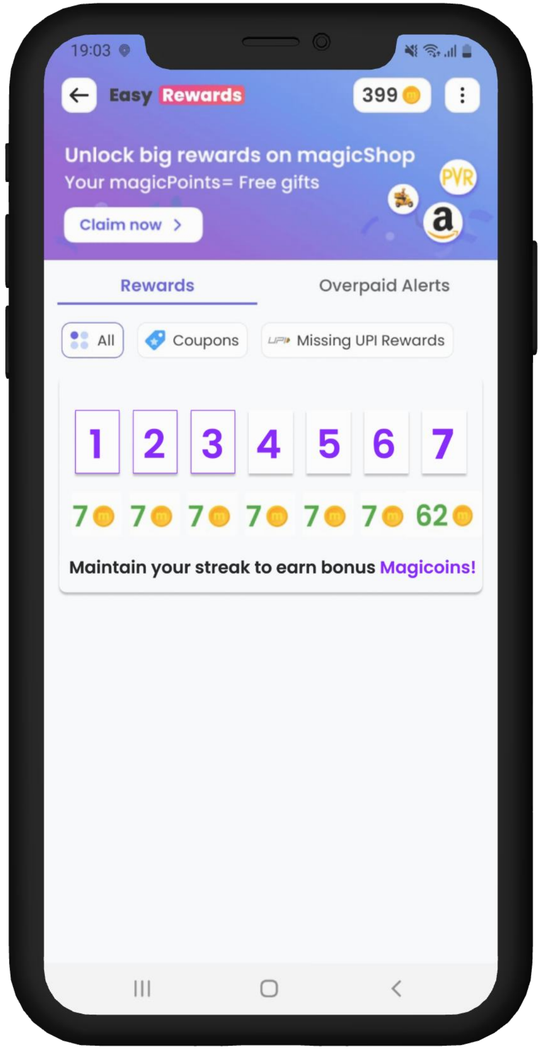

When I used the app, I got 37 coins as a daily reward. Alternatively, these coins could be spread over a week, giving small amount of coins in days 1-6 and a huge coin reward on the 7th day.

Making sure that Magicpin doesn't overgive Magiccoins.

We know magic pin is capable of giving 37 coins in a day, so giving them over a week should be possible.

How this feature can solve the retention problem?

- Gives the user a motivation to keep coming back to the app, hence increasing retention and eventually revenue.

Design explained

- The user can clearly see the number of coins he will get each day that he is able to maintain his streak.
- The purple stroke shows that the user has completed 3 days into his streak.

Add-ons

- Magicoins can be awarded as a monthly bonus.
- Magicoins can be awarded on festives.
- Bonus Magicoins can be awarded if the user completes 2 or 3 weekly streaks.

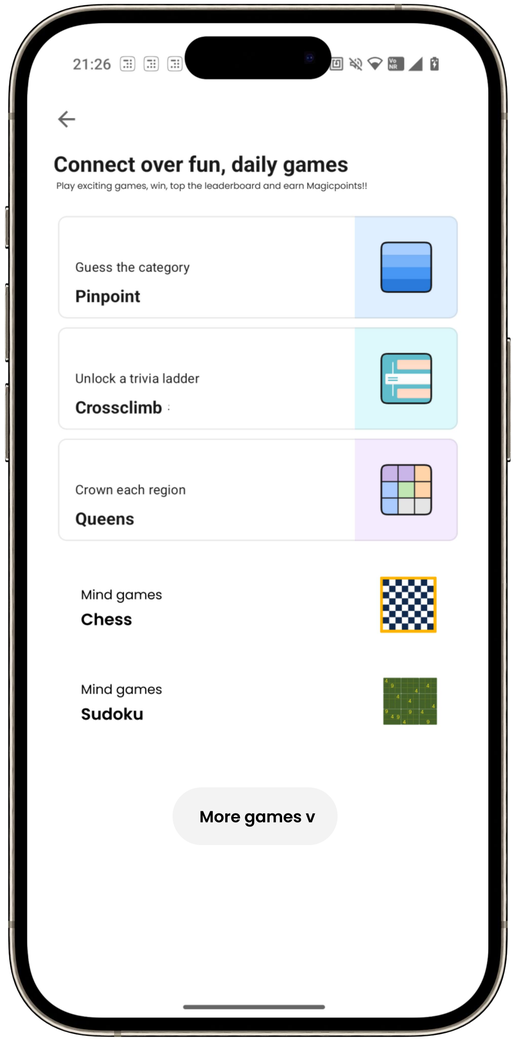

User sees more rewards on day 6-7. → User gets motivated to use the app regularly. → Directly improves User retention. → Further helps in increasing orders per user.

magicpin

MagicGames

The feature MagicGames will have several games which users can play and earn magicpoints. These magicpoints will then be used to avail discounts on different products.

The feature will have leaderboard for each game and users will only be earning magicpoints if they come at top of the leaderboard. The ones on bottom will be losing their magicpoints. This is done so that people don't play it casually and sense of competetiveness is there.

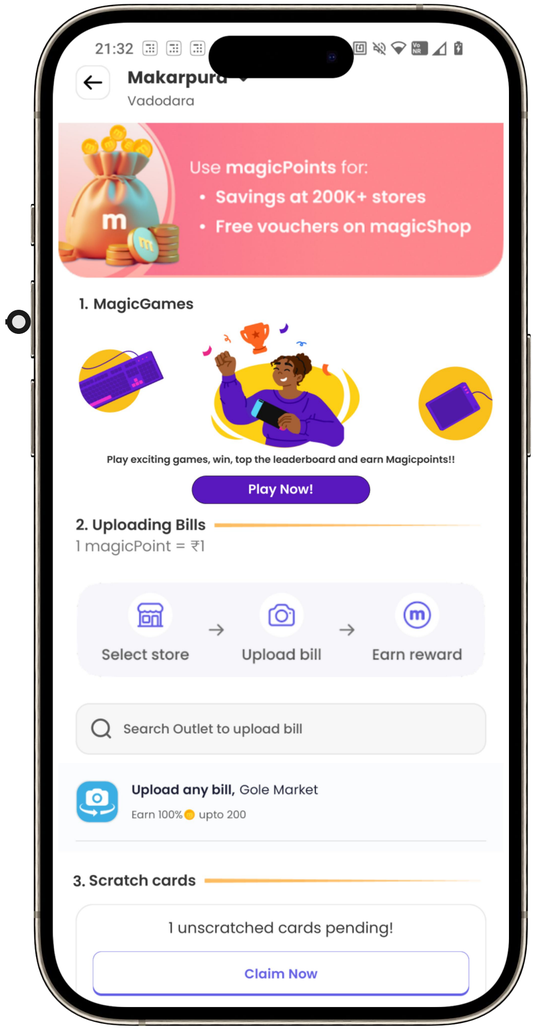

How this solves the problem?

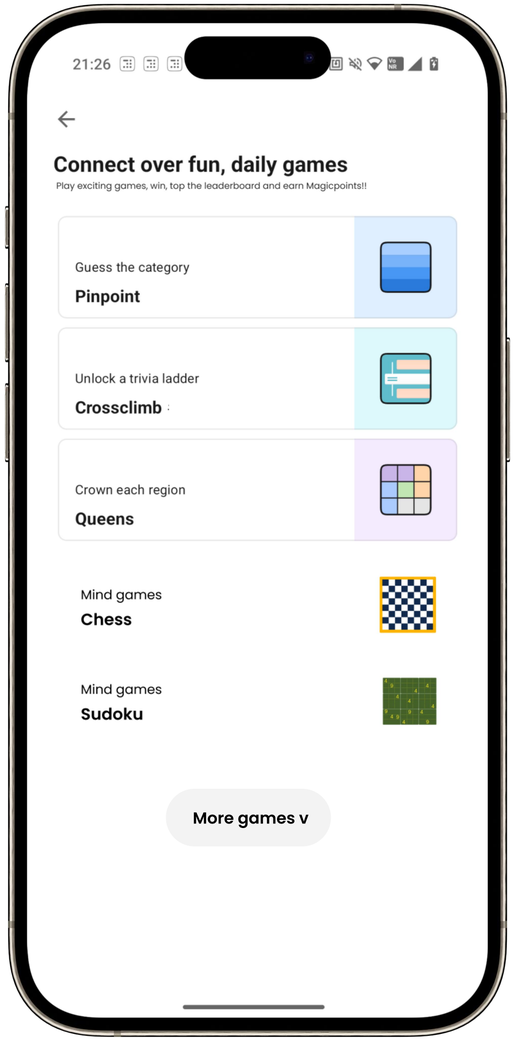

- This will keep users interested throughout the start as it will motivate them to come earn some magicpoints and avail discounts on their favourite products!
- This will bring even the young users to the app, thus helps to widen its user base.

magicpin

Feature Breakdown

- Magicgames can be accessed from the earn tab.
- More options will be available for the user to earn magicpoints.

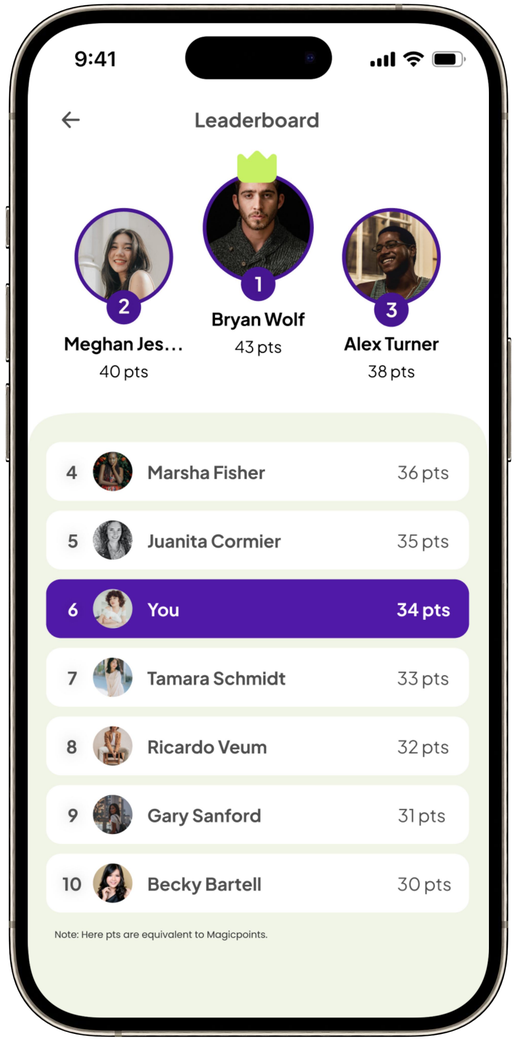

- Upon performance of the user, leaderboard will be decided for each game.
- The ones on top of leaderboard will earn magicpoints while the ones on bottom will lose the points.

- Several games are present for the user through which they can earn magicpoints.

(The games shown here are just an example. Magicpin can add games according to its as well as user's convenience)

magicpin

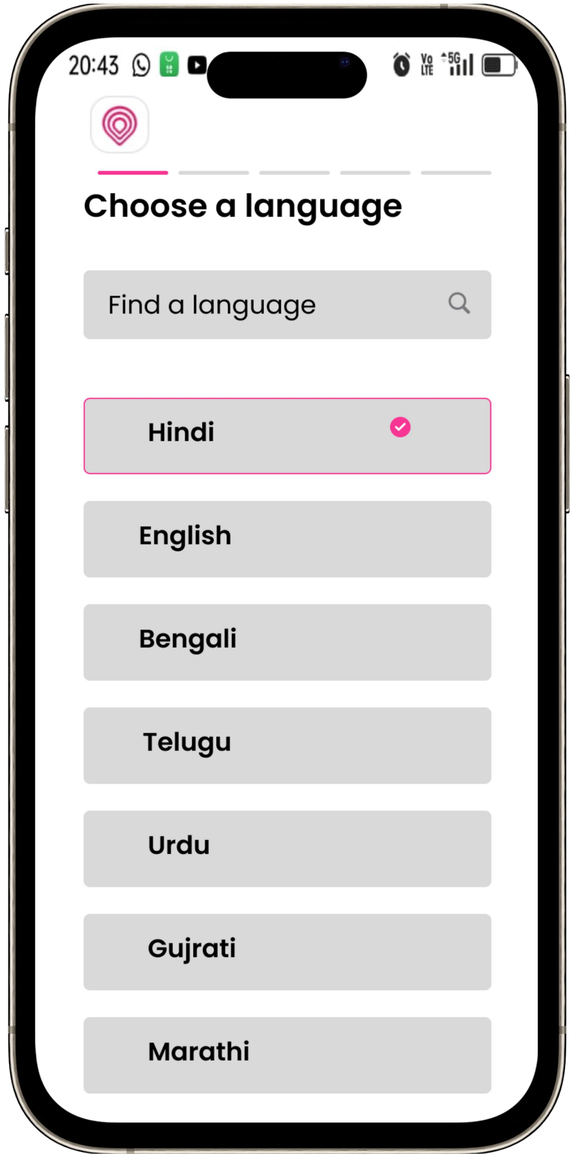

Multilingual Support

'Multilingual Support' simply means that the app will provide a multilingual interface and **multiple language** option for its content. Users can opt for any language in which they are comfortable while browsing through the app.The users will be asked to choose the language progressing through the login process.

It will also include the **local languages** based on the locality of the user as shared by the user thus even making it possible to reach a **wider audience** and make the users feel included.This will also lead to the end of the **confusions** which users have due to lack of understanding of a particular language .This solution will help in bringing the local users to the app.

How this solves the problem?

- Will help to reach to a broader user base ,thus bringing more users and can even bring those users who left the platform due to difficult interface of the app.
- Since the app mainly focuses on local delivery and hence including local languages will help in increasing accessibility and inclusivity.

The user will be presented with the opportunity to select their preferred language for operating the app, just after initiating the app .From the given options the user can select their language.

Reduces User friction

Increase Retention

MagicStreaks			
Weekly Streaks completed per user.	Average User streak length.	Insta stories shared per user.	Monthly Streaks completed per user.

MagicGames			
Session duration per game per user.	Game completion per game per user.	Insta stories shared per game per user.	Daily active users or weekly active users.

Multilingual Support			
Number of users per language.	ARPU for language switching users.	MAU for language switching users.	DAU for language switching users.

North star metric - Decrease in Churn Rate

magicpin

GTM Strategy

Market Research

Understanding about the target users,their habits and preferences and about the competitors

Feature Development

Development of the features according to their prioritisation ,test them and fix bugs and make it ready for beta release

Beta Launch

Launching of features based on their prioritization and making it accessible to limited users

Feedback Collection

Collecting the reviews from the existing users and address any issue promptly

Final Release

Enhancing the features and fixing the bugs based on feedback and releasing the final version of the product

magicpin

GTM Strategy

01 Multilingual Support

1. Understanding the user background based on their location ,taste and preferences
2. Making all the languages used by Magicpin's user(based on information got from 1st point) available in the app
3. Updating the app with the new feature.
4. Advertising this feature by collaborating with social media influencers from different regions having different language preference.
5. Monitoring the user engagement in the app
6. Addition of new languages based on the user review and engagement.

02 MagicGames

1. Understanding why is it difficult to earn magic points.
2. Introducing various games in the app to make the users more competetive.
3. Sending sms and emails to the users to inform them about the new feature .
4. Regularly sending push up notifications to the users reminding them of their position in the leaderboard.
5. Tracking the number of times the users are opening the games and playing to earn magic points.
6. Improving the games if needed, based on the user reviews

03 MagicStreaks

1. Understanding user behaviour and user engagement.
2. Creating suspense among the users regarding a new feature through attractive notifications.
3. Updating the app with MagicStreaks feature.
4. Spreading the insights of the feature through ads in social media platforms and by collaborating with the social media influencers.
5. Monitoring how actively the user is involved to earn magicpoints by maintaining the streak.
6. Addition of sub-features to this feature based on the response given by users to MagicStreaks
